DataMelon Labs

INDUSTRY PROJECT REPORT

DataMelon Labs Industry Fellowship

Data Analyst

PREPARED BY	Kartikey Singh
ROLE	Data Analyst
TECHNOLOGY	[Tools used, e.g. SQL | Power BI | Python]
FELLOWSHIP PERIOD	[Start date - End date]
SUBMISSION	Final Evaluation Report

INDUSTRY PROJECT - 2026

Final evaluation submission | Data Analytics & Business Intelligence

Table of Contents

No.	Project / Section
1	Retail Executive Summary Report
2	Like-for-Like (LFL) Performance Analysis
3	Geography Analytics Dashboard
4	Department Analytics Dashboard
5	Customer Analysis
6	Overall Project Conclusion

This report consolidates the projects completed during the Industry Project and presents the business problem, analytical work, findings, and business interpretation for each project.

1. Retail Executive Summary Report

Brief Project Summary

An executive-level report summarizing overall retail performance across sales, transactions, customer count, loyalty-program sales, and monthly trends.

Business Problem and Explanation

Leadership needed one consolidated view of how the business was performing, and whether sales growth was being driven by more transactions, more customers, or loyalty-program activity.

Key Work Performed

- Summarized overall sales and transaction performance
- Analyzed customer count and loyalty-program sales
- Tracked monthly trends across the period
- Built an executive-level view of key business metrics
- [Add the tools / queries / measures you used, e.g. SQL, Power BI, DAX]

Important Insights / Findings

- [Finding with a real figure from your analysis]
- [Finding 2]
- [Finding 3]

Business Impact / Interpretation

[What the findings mean for the business and what action they support.]

2. Like-for-Like (LFL) Performance Analysis

Brief Project Summary

A comparison of current-year and prior-year performance to measure true year-over-year growth on a comparable basis.

Business Problem and Explanation

Raw year-over-year comparisons can be distorted by differences between periods. The business needed a fair, comparable measure of growth.

Key Work Performed

- Compared current-year and prior-year sales and transactions
- Calculated growth rates on a like-for-like basis
- Analyzed growth across relevant dimensions
- [Add the tools / queries / measures you used, e.g. SQL, Power BI, DAX]

Important Insights / Findings

- [Finding with a real figure from your analysis]
- [Finding 2]
- [Finding 3]

Business Impact / Interpretation

[What the findings mean for the business and what action they support.]

3. Geography Analytics Dashboard

Brief Project Summary

A geographic analysis of regional performance, city-level shopping behaviour, and product and category demand by location.

Business Problem and Explanation

The business needed to understand where performance was strong or weak, how shopping behaviour differed between cities, and which products and categories sold best in each geography.

Key Work Performed

- Analyzed performance across regions
- Reviewed city-level shopping behaviour
- Analyzed product and category demand by geography
- Built a geography dashboard to present the results
- [Add the tools / queries / measures you used, e.g. SQL, Power BI, DAX]

Important Insights / Findings

- [Finding with a real figure from your analysis]
- [Finding 2]
- [Finding 3]

Business Impact / Interpretation

[What the findings mean for the business and what action they support.]

4. Department Analytics Dashboard

Brief Project Summary

A department-level analysis covering department health, category performance, contribution to total sales, and growth.

Business Problem and Explanation

The business needed to know which departments and categories were driving sales and growth, and which were underperforming and needed attention.

Key Work Performed

- Assessed department health and sales contribution
- Analyzed category-level performance and growth
- Built a department dashboard to present the results
- [Add the tools / queries / measures you used, e.g. SQL, Power BI, DAX]

Important Insights / Findings

- [Finding with a real figure from your analysis]
- [Finding 2]
- [Finding 3]

Business Impact / Interpretation

[What the findings mean for the business and what action they support.]

5. Customer Analysis

Brief Project Summary

A customer analysis covering customer segments, loyalty tiers, repeat rate, new customers, and customer spending.

Business Problem and Explanation

The business needed to understand who its customers were, how loyalty tiers and segments differed in value, and whether customer growth was translating into stronger spending.

Key Work Performed

- Segmented customers and analyzed loyalty tiers
- Measured repeat rate and new-customer contribution
- Analyzed customer spending patterns
- [Add the tools / queries / measures you used, e.g. SQL, Power BI, DAX]

Important Insights / Findings

- [Finding with a real figure from your analysis]
- [Finding 2]
- [Finding 3]

Business Impact / Interpretation

[What the findings mean for the business and what action they support.]

6. Overall Project Conclusion

[Short paragraph tying all projects together: how they connect and what the overall picture is.]

Overall analytical flow

- Retail Executive Summary Report: [one line on what it established]
- Like-for-Like (LFL) Performance Analysis: [one line on what it established]
- Geography Analytics Dashboard: [one line on what it established]
- Department Analytics Dashboard: [one line on what it established]
- Customer Analysis: [one line on what it established]

Overall Interpretation

[Your closing interpretation and what you learned.]
